Carpet Cleaning Instructions

CARPET CLEANERS

iambestcleaner@gmail.com
www.gethappy.ca

Thank you for allowing me to clean your wall-to-wall carpeting. I will use the best techniques and material available to insure the best work possible. You can help by noting the following:

Before Cleaning

1. **Make** sure all small breakable items are removed from tables, dressers, china cabinets, etc., especially from the furniture you wish moved.
2. **Remove** shoes and other items from closets and under beds.
3. **Clear** your driveway so that our cleaning truck may pull up as close to the house as possible.

During Cleaning

1. **SPOTS AND STAINS:** Not all stains can be removed completely even with the aid of professional spotting agents. Due to dye characteristics, pH effects, oxidation and other reactions, some spots may not be completely removed.
2. **AIR FILTRATION LINES** (dark lines that often appear around wall edges and under doorways): It is difficult to predict how filtration lines will respond to cleaning for they are a combination of excess soil and discoloration due to various gasses and dust filtering through the carpet. The soil can be removed. However the remaining discoloration may still be quite noticeable.
3. **TRAFFIC AREAS:** More heavily used areas often show some degree (although often minor) of discoloration after cleaning. This will vary depending on the degree of use, type and colour of carpet and general wear.
4. **SAFETY:** For health and safety reasons always keep small children and pets off freshly cleaned carpet.

BEWARE walking from wet carpet to tile or lino. It will be very *slippery!!!*

After Cleaning

1. It is best to stay off damp carpet as much as possible both to avoid soil tracking and to allow the pile to dry in its "up" position. Good time to practice levitation. ;-)
2. If you walk directly on the damp carpet, it's best not to wear shoes with shoe dye, for under some circumstances it can transfer to the carpet. Best to wear is a clean, non-marking rubber sole shoe, i.e. running shoe or the booties that I'll provide you. This will prevent resoiling of the carpet and keep your footsies dry.
3. **Drying time: 4 to 24 hours** depending on the fiber, degree of soiling, and outside weather. After the carpet is treated with carpet protector, allow 24 hours for curing.
4. Plastic squares and blocks found under your furniture should be left in place for 48 to 72 hours until the carpet is totally dry.
5. **Ventilation:** Increased air circulation will aid your carpet in drying.

**CARING FOR YOUR CARPETS BETWEEN PROFESSIONAL CLEANING IS IMPORTANT.
VACUUM REGULARLY AND IF YOU HAVE ANY QUESTIONS OR COMMENTS,
PLEASE DON'T HESITATE TO CALL.**
